Radoslav Dimitrov
Junior Web Developer with C#

Since I was a child, I have been fascinated by logical and mathematical problems and drawing. I graduated from college with a degree in Computer Animation, where I developed my skills in 3D modeling and animation software. In 2020, I realized that software development combines all of my passions, and so my journey as a software engineer began. I graduated from SoftUni in 2022 with a specialization in C# Web Developer, and I continue to learn and grow to this day.

college St. Ariadna

09/2013 - 06/2015   *Bulgaria, Sofia*

Courses
- 2D Animation
- Adobe After Effect
- Marketing Design
- Drowing
- Adobe Photoshop

PERSONAL PROJECTS

CarStory (08/2023 - Present)
- CarStory is a web application that lets you store and access data for past car repairs. It is a centralized database that shows all repairs for a given car, based on its VIN number. You can use it to check the service history of any car, add cars to your collection, leave reviews for repair shops, and search for repair shops by name and city.
- I created this project as a solution to the problem of paper service history of cars. I wanted to make a platform where car owners and repair shops can easily record and access the car repairs and service history online, without having to keep or carry documents. I wanted to make a platform where car owners can find reliable and trustworthy repair shops, based on the reviews from other users.

YourPlace (04/2022 - 05/2022)
- ASP.Net Project An web application that has a purpose to combine all people that can suggest a survice! Like an auto mechanic, cosmetic, hairdresser, lawyer. I used this project for my graduation from SoftUni.
- Learn how to make a bit bigger projects.
- Strenthen my skills with data and how to parse and present it.
